

# Magnet Project API Documentation

---

## Route Authentication & Role Protection Summary

Module	Route/Action	Public	Auth Required	Role(s) Required
Products	GET /api/products	No	Yes	Any authenticated user
	GET /api/products/:id	No	Yes	Any authenticated user
	POST /api/products/addProductsByBusiness	No	Yes	business
	POST /api/products/addProductsByMagnet_employee	No	Yes	magnet_employee, admin
	PUT /api/products/:id	No	Yes	business (own), admin, magnet_employee
	DELETE /api/products/:id	No	Yes	business (own), admin, magnet_employee
	PUT /api/products/:id/approve	No	Yes	admin, magnet_employee
	PUT /api/products/:id/decline	No	Yes	admin, magnet_employee
Categories	GET /api/categories	Yes	No	None
	POST /api/categories	No	Yes	business, admin, magnet_employee
	PUT /api/categories/:id	No	Yes	business (own), admin, magnet_employee
	DELETE /api/categories/:id	No	Yes	business (own), admin, magnet_employee
Orders	POST /api/orders	No	Yes	customer
	GET /api/orders/my	No	Yes	customer
	GET /api/orders/business-products	No	Yes	business

Module	Route/Action	Public	Auth Required	Role(s) Required
	GET /api/orders/:id	No	Yes	admin, magnet_employee, customer (own)
	GET /api/orders	No	Yes	admin, magnet_employee
Reviews	POST /api/reviews/products/:id/reviews	No	Yes	customer
	GET /api/reviews/products/:id/reviews	Yes	No	None
	DELETE /api/reviews/:id	No	Yes	admin, magnet_employee
Wishlist	GET /api/wishlist	No	Yes	customer
	POST /api/wishlist	No	Yes	customer
	DELETE /api/wishlist/:productId	No	Yes	customer
Address	GET /api/addresses	No	Yes	customer
	POST /api/addresses	No	Yes	customer
	PUT /api/addresses/:id	No	Yes	customer
	DELETE /api/addresses/:id	No	Yes	customer
User	GET /api/user/profile	No	Yes	customer
	PUT /api/user/profile	No	Yes	customer
	GET /api/user/business-requests	No	Yes	admin, magnet_employee
	POST /api/user/business-approval	No	Yes	admin, magnet_employee
	GET /api/user/business/:businessId	No	Yes	admin, magnet_employee
	GET /api/user/business-profile	No	Yes	business, admin, magnet_employee
Auth	Registration/Login/OTP	Yes	No	None
	Forgot Password	No	Yes	Any authenticated user

## Notes

- **Auth Required:** Requires a valid JWT token in the **Authorization** header.

- **Role(s) Required:** Requires the user to have one of the listed roles. If "(own)" is specified, the user must own the resource (e.g., their own product or order).
  - **Public:** Anyone can access, no authentication required.
  - **All:** All HTTP methods (GET, POST, PUT, DELETE) for that endpoint.
  - **Business (if owns product in order):** Business user can access if any product in the order is owned by them (see order tracking section).
- 

## Message Format

All API responses return bilingual messages in both English and Arabic for every endpoint, including all errors and successes. The system uses a centralized messages.js file to ensure consistency across all modules (auth, user, product, order, address, category, review, wishlist, etc.).

Example:

```
{  
  "status": "success",  
  "message": {  
    "en": "User registered successfully",  
    "ar": "تم تسجيل المستخدم بنجاح"  
  },  
  "data": { ... }  
}
```

---

## Verification Rules

### Phone Number Verification

- **If phone number is provided:** Only the phone is verified (`isPhoneVerified = true, isEmailVerified = false`)
- **If no phone number is provided:** Only the email is verified (`isEmailVerified = true, isPhoneVerified = false`)

This applies to both customer and business registration.

---

## Validation Rules

### Email Validation

- **Format:** Must match email format: `^[a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z]{2,}$`
- **Required:** Email is required for all user registrations
- **Unique:** Email must be unique across all users

### Phone Validation

- **Format:** Must match phone format: `^\+?[1-9]\d{1,14}$`

- **Optional:** Phone number is optional for customer registration
- **Unique:** If provided, phone must be unique across all users
- **Saudi Numbers:** Saudi phone numbers are automatically verified

## Password Requirements

- **Minimum Length:** 8 characters
- **Complexity:** Must contain at least:
  - One uppercase letter (A-Z)
  - One lowercase letter (a-z)
  - One number (0-9)
- **Pattern:** `^(?=.*[a-z])(?=.*[A-Z])(?=.*\d)`

## Name Validation

- **First Name:** 2-50 characters, required
- **Last Name:** 2-50 characters, required
- **Trim:** Leading and trailing whitespace is automatically removed

## Business Registration Validation

- **CR Number:** 1-50 characters, required
- **VAT Number:** 1-50 characters, required
- **Company Name:** 2-100 characters, required
- **Company Type:** 2-100 characters, required
- **Country:** 2-50 characters, required
- **City:** 2-50 characters, required
- **District:** 2-50 characters, required
- **Street Name:** 2-100 characters, required

## Product Validation

- **Category:** Required bilingual object `{ en: "English Category", ar: "Arabic Category" }`
- **Name:** Required bilingual object `{ en: "English Name", ar: "Arabic Name" }`
- **Description:** Optional bilingual object `{ en: "English Description", ar: "Arabic Description" }`
- **Unit:** Optional bilingual object `{ en: "English Unit", ar: "Arabic Unit" }`
- **Custom Fields:** Array of objects, minimum 3, maximum 10
  - Each object must have **key** and **value** properties
  - Both key and value must be bilingual objects: `{ en: "English", ar: "Arabic" }`
- **Code:** Optional, auto-generated if not provided
- **Images:** Optional array of strings (URLs)
- **Attachments:** Optional array of product IDs
- **Min Order:** Optional number
- **Price Per Unit:** Optional string
- **Stock:** Optional number

## Address Validation

- **Address Line 1:** Required string
- **Address Line 2:** Optional string
- **City:** Required string
- **State:** Required string
- **Postal Code:** Required string
- **Country:** Required string

## Category Validation

- **Name:** Required bilingual object { en: "English", ar: "Arabic" }
- **Description:** Optional bilingual object { en: "English", ar: "Arabic" }

## Review Validation

- **Rating:** Required number, min: 1, max: 5
- **Comment:** Required string

## Order Validation

- **Customer:** Required user ID
- **Items:** Required array of order items
  - Each item must have **product** (product ID) and **quantity** (number)
- **Shipping Address:** Required address ID
- **Status:** Optional, defaults to 'pending', enum: 'pending', 'confirmed', 'shipped', 'delivered', 'cancelled' (English values only, backend converts to bilingual)
  - **Valid English Statuses:** ['pending', 'confirmed', 'shipped', 'delivered', 'cancelled']
  - **Valid Arabic Statuses:** [تم التوصيل', 'تم الشحن', 'مؤكد', 'قيد الانتظار']
  - **Validation:** Backend validates status using `Order.isValidStatus()` method
  - **Conversion:** Backend converts English status to bilingual using `Order.convertStatusToBilingual()` method

---

## Auth Routes

### 1. Register User

- **POST /api/auth/register**
- **Description:** Register a new customer user with automatic verification based on phone number presence.
- **Body:**
  - **firstname** (string, required)
  - **lastname** (string, required)
  - **email** (string, required)
  - **phone** (string, optional)
  - **password** (string, required)
  - **country** (string, required)
  - **language** (string, optional, default: 'en')

- **Verification Logic:**
    - If `phone` is provided: `isPhoneVerified = true, isEmailVerified = false`
    - If `phone` is not provided: `isEmailVerified = true, isPhoneVerified = false`
  - **Response:**
    - `201 Created`: User info + JWT token with verification status
- 

## 2. Register Business

- **POST** `/api/auth/business-register`
  - **Description:** Register a new business user (requires approval) with automatic verification based on phone number presence.
  - **Body:**
    - `firstname, lastname, email, password, crNumber, vatNumber, companyName, companyType, country, city, district, streetName, phone` (all required)
  - **Verification Logic:**
    - If `phone` is provided: `isPhoneVerified = true, isEmailVerified = false`
    - If `phone` is not provided: `isEmailVerified = true, isPhoneVerified = false`
  - **Response:**
    - `201 Created`: Business info (under review) with verification status
- 

## 3. Send Email OTP

- **POST** `/api/auth/send-email-otp`
  - **Description:** Send an OTP to a new email (fails if email already exists).
  - **Body:**
    - `email` (string, required)
  - **Response:**
    - `200 OK`: Success message (bilingual)
- 

## 4. Send Phone OTP

- **POST** `/api/auth/send-phone-otp`
  - **Description:** Send an OTP to a new phone (fails if phone already exists).
  - **Body:**
    - `phone` (string, required)
  - **Response:**
    - `200 OK`: Success message (bilingual)
- 

## 5. Confirm OTP

- **POST** `/api/auth/confirm-otp`
- **Description:** Confirm an OTP for any email or phone identifier (works for both registered and non-registered users).
- **Body:**
  - `identifier` (string, required)

- `otp` (string, required)
  - **Response:**
    - `200 OK`: OTP verified successfully (bilingual message)
- 

## 6. Confirm Login OTP

- **POST** `/api/auth/confirm-login-otp`
  - **Description:** Confirm an OTP for registered users and return user data with JWT token (like login API).
  - **Body:**
    - `identifier` (string, required)
    - `otp` (string, required)
  - **Response:**
    - `200 OK`: User info + JWT token (bilingual message)
    - `404 Not Found`: User not found (bilingual message)
- 

## 7. Login

- **POST** `/api/auth/login`
  - **Description:** Login with email/phone and password.
  - **Body:**
    - `identifier` (email or phone, required)
    - `password` (string, required)
  - **Response:**
    - `200 OK`: User info + JWT token (bilingual message)
- 

## 8. Login with OTP

- **POST** `/api/auth/login-with-otp`
  - **Description:** Request an OTP for login (email or phone).
  - **Body:**
    - `identifier` (email or phone, required)
  - **Response:**
    - `200 OK`: OTP sent (bilingual message)
- 

## 9. Forgot Password

- **POST** `/api/auth/forgot-password`
  - **Description:** Change password for authenticated user.
  - **Headers:** `Authorization: Bearer <token>`
  - **Body:**
    - `newPassword` (string, required)
  - **Response:**
    - `200 OK`: Password updated (bilingual message)
-

## 10. Create Admin User

- **POST** `/api/auth/create-admin`
  - **Description:** Create a new admin user. Only accessible by authenticated admin users.
  - **Headers:** `Authorization: Bearer <token>`
  - **Body:**
    - `firstname` (string, required)
    - `lastname` (string, required)
    - `email` (string, required)
    - `phone` (string, optional)
    - `password` (string, required)
    - `country` (string, required)
    - `language` (string, optional, default: 'en')
  - **Response:**
    - `201 Created`: Admin user info (bilingual message)
    - `403 Forbidden`: Insufficient permissions (bilingual message)
    - `400 Bad Request`: Email/phone already registered (bilingual message)
- 

## 11. Create Magnet Employee User

- **POST** `/api/auth/create-magnet-employee`
  - **Description:** Create a new magnet employee user. Only accessible by authenticated admin users.
  - **Headers:** `Authorization: Bearer <token>`
  - **Body:**
    - `firstname` (string, required)
    - `lastname` (string, required)
    - `email` (string, required)
    - `phone` (string, optional)
    - `password` (string, required)
    - `country` (string, required)
    - `language` (string, optional, default: 'en')
  - **Response:**
    - `201 Created`: Magnet employee user info (bilingual message)
    - `403 Forbidden`: Insufficient permissions (bilingual message)
    - `400 Bad Request`: Email/phone already registered (bilingual message)
- 

## Product Routes

### Language Support

Products support bilingual content (Arabic and English). You can:

- **Get products in specific language:** Add `?lang=en` or `?lang=ar` to the URL
- **Get products in user's preferred language:** The system uses the user's language preference
- **Get full bilingual data:** Use `?lang=both` to get both languages

### 1. Get Products

- **GET** /api/products
- **GET** /api/products?lang=en (English only)
- **GET** /api/products?lang=ar (Arabic only)
- **GET** /api/products?lang=both (Both languages)
- **Description:** Get all approved products (requires authentication). Admin/magnet\_employee can see all products.
- **Headers:** Authorization: Bearer <token>
- **Response:**
  - 200 OK: List of products
- **Product Object:**
  - code (string, auto-generated if not provided, e.g. "A001")
  - category (object, required, bilingual: { en: "English Category", ar: "Arabic Category" })
  - name (object, required, bilingual: { en: "English Name", ar: "Arabic Name" })
  - images (array of strings)
  - description (object, optional, bilingual: { en: "English Description", ar: "Arabic Description" })
  - attachments (array of product IDs, references to other products)
  - unit (object, optional, bilingual: { en: "English Unit", ar: "Arabic Unit" })
  - minOrder (number)
  - pricePerUnit (string)
  - stock (number)
  - customFields (array of objects, min 3, max 10, each: { key: { en: "English Key", ar: "Arabic Key" }, value: { en: "English Value", ar: "Arabic Value" } })
  - status (string: 'pending', 'approved', 'declined')
  - owner (user id, required)
  - approvedBy (user id, admin/employee who approved)
  - createdAt (date)

---

## 1a. Get Product by ID

- **GET** /api/products/:id
- **GET** /api/products/:id?lang=en (English only)
- **GET** /api/products/:id?lang=ar (Arabic only)
- **GET** /api/products/:id?lang=both (Both languages)
- **Description:** Get a single product by its ID. Requires authentication. Admin, business, and magnet\_employee can access any product (including pending/declined).
- **Headers:** Authorization: Bearer <token>
- **Response:**
  - 200 OK: Product object (see above)
  - 404 Not Found: If product does not exist
  - 403 Forbidden: If trying to access a non-approved product without proper role

---

## 2. Add Product (Business)

- **POST** /api/products/addProductsByBusiness

- **Description:** Business user adds a new product (pending approval). Product code is auto-generated if not provided.
  - **Headers:** Authorization: Bearer <token>
  - **Body:**
    - category (object, required, bilingual: { en: "English Category", ar: "Arabic Category" })
    - name (object, required, bilingual: { en: "English Name", ar: "Arabic Name" })
    - images (array of strings, optional)
    - attachments (array of product IDs, references to other products, optional)
    - description (object, optional, bilingual: { en: "English Description", ar: "Arabic Description" })
    - unit (object, optional, bilingual: { en: "English Unit", ar: "Arabic Unit" })
    - minOrder, pricePerUnit, stock (all optional)
    - customFields (array of objects, min 3, max 10, each: { key: { en: "English Key", ar: "Arabic Key" }, value: { en: "English Value", ar: "Arabic Value" } }, required)
  - **Response:**
    - 201 Created: Product info (pending approval) with bilingual message
- 

### 3. Add Product (Magnet Employee)

- **POST /api/products/addProductsByMagnet\_employee**
  - **Description:** Magnet employee adds a new product (approved immediately). Product code is auto-generated if not provided.
  - **Headers:** Authorization: Bearer <token>
  - **Body:**
    - category (object, required, bilingual: { en: "English Category", ar: "Arabic Category" })
    - name (object, required, bilingual: { en: "English Name", ar: "Arabic Name" })
    - images (array of strings, optional)
    - attachments (array of product IDs, references to other products, optional)
    - description (object, optional, bilingual: { en: "English Description", ar: "Arabic Description" })
    - unit (object, optional, bilingual: { en: "English Unit", ar: "Arabic Unit" })
    - minOrder, pricePerUnit, stock (all optional)
    - customFields (array of objects, min 3, max 10, each: { key: { en: "English Key", ar: "Arabic Key" }, value: { en: "English Value", ar: "Arabic Value" } }, required)
    - owner (user id, required)
  - **Response:**
    - 201 Created: Product info (approved) with bilingual message
- 

### 4. Update Product

- **PUT /api/products/:id**
- **Description:** Business user updates their own product (pending approval). Admin/magnet\_employee can update and approve/decline.
- **Headers:** Authorization: Bearer <token>

- **Body:**
    - Any product field (see above)
    - `status` (optional, only admin/magnet\_employee can set to 'approved' or 'declined')
  - **Response:**
    - `200 OK`: Updated product info with bilingual message
- 

## 5. Delete Product

- **DELETE** `/api/products/:id`
  - **Description:** Business user deletes their own product, or admin/employee deletes any product.
  - **Headers:** `Authorization: Bearer <token>`
  - **Response:**
    - `200 OK`: Product deleted with bilingual message
- 

## 6. Approve Product

- **PUT** `/api/products/:id/approve`
  - **Description:** Admin/magnet\_employee approves a product.
  - **Headers:** `Authorization: Bearer <token>`
  - **Response:**
    - `200 OK`: Product approved with bilingual message
- 

## 7. Decline Product

- **PUT** `/api/products/:id/decline`
  - **Description:** Admin/magnet\_employee declines a product.
  - **Headers:** `Authorization: Bearer <token>`
  - **Response:**
    - `200 OK`: Product declined with bilingual message
- 

# Real-Time Order Tracking (WebSocket)

## Overview

- The API supports real-time order status updates using WebSocket (Socket.IO).
- Clients can subscribe to updates for specific orders and receive instant notifications when the order status changes (e.g., confirmed, shipped, delivered).

## How It Works

1. **Client authenticates with a JWT token when connecting to the WebSocket.**
2. **Client joins a room for a specific order using the order ID.**
3. **When the order status changes, the server emits an `orderStatusUpdate` event to all clients in that room.**

## WebSocket Connection (Socket.IO)

- **URL:** `ws://<your-server>:5000` (or `wss://` for HTTPS)
- **Library:** `socket.io-client`

### Client Example (JavaScript/React):

```
import { io } from 'socket.io-client';
const socket = io('http://localhost:5000', {
  auth: { token: '<JWT_TOKEN>' }
});

// Join the order room
socket.emit('joinOrderRoom', '<ORDER_ID>');

// Listen for updates
socket.on('orderStatusUpdate', (data) => {
  // data: { orderId, status, statusLog, updatedAt }
  console.log('Order update:', data);
});
```

### Order Room Access Rules

- **Admin & magnet\_employee:** Can track any order.
- **Business:** Can track orders that include products they own.
- **Customer:** Can track only their own orders.
- Unauthorized attempts to join order rooms will be ignored.

### Server-Side Security

- The server authenticates each socket connection using the JWT token.
- The server enforces the above access rules for joining order rooms.

### Order Status Update Event

- **Event:** `orderStatusUpdate`
- **Payload:**

```
{
  "orderId": "...",
  "status": "shipped",
  "statusLog": [
    { "status": "pending", "timestamp": "..." },
    { "status": "confirmed", "timestamp": "..." },
    { "status": "shipped", "timestamp": "..." }
  ],
  "updatedAt": "2024-07-10T12:00:00.000Z"
}
```

## Security Notes

- Clients must provide a valid JWT token when connecting.
  - The server will only allow joining order rooms for orders the user is authorized to track (see access rules above).
  - Unauthorized attempts to join rooms will be ignored.
- 

## Additional Utility Features

### Email and SMS Utilities

The API includes comprehensive email and SMS functionality for user verification and notifications:

#### Email Features

- **Email OTP Generation:** Automatic generation of 6-digit verification codes
- **Email Templates:** Pre-formatted HTML email templates for various notifications
- **Business Notifications:** Automatic email notifications for business registration status changes
- **Verification Emails:** Email verification for user registration

#### SMS Features

- **SMS OTP Generation:** Automatic generation of 6-digit SMS verification codes
- **Saudi Number Support:** Special handling for Saudi phone numbers (+966)
- **SMS Templates:** Pre-formatted SMS messages for various notifications
- **Phone Verification:** SMS verification for user registration

### Product Code Generation

The API includes an automatic product code generation system:

#### Features

- **Auto-Generation:** If no product code is provided, the system automatically generates a unique code
- **Format:** Codes follow the pattern "A001", "A002", etc.
- **Uniqueness:** Each generated code is guaranteed to be unique
- **Custom Codes:** Users can provide their own custom codes if desired

### User Model Features

The user model includes several advanced features:

#### Favorites System

- **Add to Favorites:** Users can add products to their favorites list
- **Remove from Favorites:** Users can remove products from their favorites
- **View Favorites:** Users can view their complete favorites list

#### Cart System

- **Add to Cart:** Users can add products to their shopping cart
- **Cart Management:** Users can update quantities and remove items
- **Cart Persistence:** Cart data is stored with the user account

## Business Approval Workflow

- **Registration Review:** Business registrations require admin/employee approval
- **Status Tracking:** Business approval status is tracked (pending, approved, rejected)
- **Notification System:** Automatic notifications for approval status changes
- **Rejection Reasons:** Admins can provide reasons for business registration rejections

## Verification Status Tracking

- **Email Verification:** Track whether user's email is verified
- **Phone Verification:** Track whether user's phone is verified
- **Automatic Verification:** Saudi phone numbers are automatically verified
- **Manual Verification:** Other verification methods available

## Bilingual Message System

The API includes a comprehensive bilingual message system:

## Features

- **Centralized Messages:** All messages are stored in a centralized `messages.js` file
- **Bilingual Support:** All messages are available in both English and Arabic
- **Consistent Format:** All API responses follow the same bilingual format
- **Error Messages:** Comprehensive error messages in both languages
- **Success Messages:** Success confirmations in both languages

## Message Format

```
{  
  "status": "success",  
  "message": {  
    "en": "Operation completed successfully",  
    "ar": "تم إكمال العملية بنجاح"  
  },  
  "data": { ... }  
}
```

## Authentication and Authorization

The API includes a robust authentication and authorization system:

### JWT Authentication

- **Token-Based:** Uses JWT tokens for authentication

- **Expiration:** Tokens expire after 7 days
- **Refresh:** Tokens can be refreshed
- **Secure:** Uses environment variables for secret keys

## Role-Based Access Control

- **Admin:** Full system access
- **Magnet Employee:** Limited admin access
- **Business:** Business-specific features
- **Customer:** Customer-specific features

## Middleware System

- **Auth Middleware:** Verifies JWT tokens
  - **Role Middleware:** Enforces role-based access
  - **Validation Middleware:** Validates request data
  - **Error Handling:** Comprehensive error handling
- 

## Category Routes

### Language Support

Categories support bilingual content (Arabic and English). You can:

- **Get categories in specific language:** Add `?lang=en` or `?lang=ar` to the URL
- **Get categories in user's preferred language:** The system uses the user's language preference
- **Get full bilingual data:** Use `?lang=both` to get both languages

### Category Object

- `name` (object, required, bilingual: `{ en: "English Name", ar: "Arabic Name" }`)
- `description` (object, optional, bilingual: `{ en: "English Description", ar: "Arabic Description" }`)
- `createdBy` (ObjectId, reference to User)
- `createdAt` (date)
- `updatedAt` (date)

### 1. Get Categories

- **GET** `/api/categories`
- **GET** `/api/categories?lang=en` (English only)
- **GET** `/api/categories?lang=ar` (Arabic only)
- **GET** `/api/categories?lang=both` (Both languages)
- **Description:** Get all categories (public).
- **Response:**
  - `200 OK`: List of categories

### 2. Create Category

- **POST /api/categories**
- **Description:** Create a new category (business, admin, or magnet\_employee only).
- **Headers:** Authorization: Bearer <token>
- **Body:**
  - name (object, required, bilingual: { en: "English Name", ar: "Arabic Name" })
  - description (object, optional, bilingual: { en: "English Description", ar: "Arabic Description" })
- **Response:**
  - 201 Created: Category info (bilingual message)

### 3. Update Category

- **PUT /api/categories/:id**
- **Description:** Update a category (business, admin, or magnet\_employee only).
- **Headers:** Authorization: Bearer <token>
- **Body:**
  - name (object, optional, bilingual: { en: "English Name", ar: "Arabic Name" })
  - description (object, optional, bilingual: { en: "English Description", ar: "Arabic Description" })
- **Response:**
  - 200 OK: Updated category info (bilingual message)

### 4. Delete Category

- **DELETE /api/categories/:id**
- **Description:** Delete a category (business, admin, or magnet\_employee only).
- **Headers:** Authorization: Bearer <token>
- **Response:**
  - 200 OK: Category deleted (bilingual message)

---

## Order Routes

### Language Support

Orders support bilingual content (Arabic and English). You can:

- **Get orders in specific language:** Add ?lang=en or ?lang=ar to the URL
- **Get orders in user's preferred language:** The system uses the user's language preference
- **Get full bilingual data:** Use ?lang=both to get both languages

### Order Object

- **customer** (ObjectId, required, reference to User)
- **items** (array of objects, required)
  - Each item: { product: ObjectId, quantity: Number }
- **shippingAddress** (ObjectId, reference to Address)
- **status** (object, bilingual: { en: "pending", ar: "قيد الانتظار" })
- **statusLog** (array of objects)

- Each log: { status: { en: "pending", ar: "قيد الانتظار" }, timestamp: Date }
- createdAt (date)
- updatedAt (date)

**Note:** Order status is stored as bilingual objects but returned as localized strings based on the lang parameter:

- pending → { en: "pending", ar: "قيد الانتظار" }
- confirmed → { en: "confirmed", ar: "مؤكدة" }
- shipped → { en: "shipped", ar: "تم الشحن" }
- delivered → { en: "delivered", ar: "تم التوصيل" }
- cancelled → { en: "cancelled", ar: "ملغى" }

## 1. Create Order

- **POST /api/orders**
- **Description:** Create a new order (customer only).
- **Headers:** Authorization: Bearer <token>
- **Body:**
  - Order details (see order model)
- **Response:**
  - 201 Created: Order info (bilingual message)

## 2. Get My Orders

- **GET /api/orders/my**
- **GET /api/orders/my?lang=en** (English only)
- **GET /api/orders/my?lang=ar** (Arabic only)
